

## Surface Tension Work card 2

You will need:

- A beaker of water
- A pipette

What you do:

- Fill the pipette with water from the beaker.
- Hold the pipette above the beaker of water.
- Carefully squeeze the pipette to let a drop of water fall into the beaker.
- Observe the drop of water hitting the surface of the water.
- Repeat this several times and observe the shapes which the droplet makes when it hits the water's surface.
- Now record your observations on Surface Tension Worksheet 2.
